

# DOUBLE PUMP SYSTEM

## Water-Based Glue System

### The PUMP SYSTEM consists of...

1. Main Station with 2 Pumps - (1 x Catalyser, 1 x Adhesive)
2. Up to as many as 20 Spray Stations.
3. Anti-Pulsation System keeps the adhesive pressure to each gun constant.
4. Valve Block (optional extra) allows future station additions without having to cut pipes.

### ADVANTAGES...

- \* Tailored to suit the individual factory with as many as 20 spray stations.
- \* Each gun operates independently of each other - allowing variable pressure from station to station.
- \* NO refilling.
- \* Comes in a lockable, clean cabinet.
- \* Very low maintenance.
- \* Enables you to use glue in 220Kg or 1000Kg drums.

*Each spray station is for one gun, and is composed of 2 boxes and one gun. One box is for connection to the line, and the other box is for regulation, allowing each gun to run at independent settings from each other.*

*Contact your local Sales Representative for more details...*
