

ECO MINI

Water-Based Glue System

TECHNICAL CHARACTERISTICS

- * Nozzle sizes available :
1.0, 1.3, 1.5, 1.8, 2.0, 2.5, 3.0
- * Tank Capacity :
Glue (10Ltr), Catalyser (10Ltr)
- * Interfaces in Stainless Steel
and specific plastic substances
- * Maximum Floorspace Dimension :
35 x 50 x 35cm
- * Weight (empty tank) : 20Kg
- * MADE IN ITALY

The ECO MINI System is the ideal solution for applications of water-based bi-component products.

This system consists of two tanks, one for the adhesive and the other for the catalyser, and a “MASTER SP2” external mixing spray gun. ECO MINI, being a handy sized system and easily portable, unites to best effect an extremely moderate price with easy handling of the underpressure spray gun.

All surfaces in contact with the product are in stainless steel and specific plastic substances. Precision controls guarantee the high quality of this system’s performance. Another feature of the ECO MINI spraying system is the ability to regulate the bonding time of the glue, from instant bonding to many days - it is the users choice.

Our special “MASTER” spray guns with external mixing, based on the exclusive catalyser premixing technique, permit perfect mixing of the components and guarantee lower maintenance requirements for the whole system.
