

# ECO PLUS with PUMP

## Water-Based Glue System

PUMP

### TECHNICAL CHARACTERISTICS

- \* Dimensions : 90 x 50 x 80cm
- \* Pump (adhesive) double diaphragm
- \* Tank Capacity (catalyst) : 20Ltr
- \* Interfaces in Stainless Steel and specific plastic substances
- \* Available with 1 or 2 spray guns

**The ECO PLUS System is the ideal solution for applications of water-based bi-component products, where factories are subjected to dust and dirt.**

This system, equipped with a double exit, can serve either 1 or 2 Master SP2 or Bravo SP2 spray guns simultaneously. It is a handy sized, portable structure that is fully enclosed to eliminate potential dirt and dust setting into the catalyser underpressure pot when opening the machine. It also has the added advantage of the pump system for the adhesive.

All surfaces in contact with the product are in stainless steel and specific plastic substances. Filters and precision controls guarantee the system's high performance.

Our special "MASTER" or "Bravo" SP2 spray guns with external mixing, based on the exclusive catalyser premixing technique, permit perfect mixing of the components and guarantee lower maintenance requirements for the whole system.

**Product Code:  
EPP**
