

ECO STAR SPRAYING SYSTEM

The products in the ECO range are the ideal answer for applying water based bi-component adhesives, Created to meet requirements for safeguarding the environment and workers safety.

The ECOSTAR model is equipped with four independent outlets and can therefore simultaneously feed up to four spray guns from the Master or Bravo series. ECOSTAR's special feature is its pressurized tank into which the tank of adhesive or catalyst can be directly inserted, without the need for transferring.

This Brings together in a single machine the advantages of pressurized systems (constant accurate regulation) and pump systems (use of the product directly from the original containers, clean systems, reduced maintenance).

All surfaces in contact with the products are made of stainless steel and specific plastics. Filters and precision regulators ensure top performance from the system and adhesives used.

Finally, our external mixing spray guns (Master and Bravo series), based on an exclusive technique of Pre-nebulisation of the catalyst permit perfect mixing of the components and guarantee reduced maintenance of the whole system.

ECOSTAR
